ENGINE IMMOBILIZER SYSTEM

■ DESCRIPTION

- The new Fortuner/Hilux SW4 uses an engine immobilizer system. For details on the provision, see Equipment List on page MO-23.
- This system prevents vehicle theft by disabling the engine from starting if an ignition key, of which the ID code does not match the vehicle's pre-registered codes, is used in an attempt to take the vehicle.
- This system consists of the transponder chip, coil, amplifier, and transponder key ECU. This system uses a transponder system, which uses a transponder chip embedded in the grip of the ignition key. When the coil located around the ignition key cylinder receives the ID code signal transmitted by the transponder chip, the transponder key ECU determines whether or not the ID code matches the code stored.
