CRUISE CONTROL SYSTEM

■ DESCRIPTION

- The new Fortuner/Hilux SW4 uses a cruise control system. For details on the provision, see Equipment List on page MO-23.
- On the models with the 1KD-FTV engine, once the system is set to a desired vehicle speed, the injection volume is adjusted automatically to maintain the vehicle speed without depressing the accelerator pedal. This system effects control through the diesel EFI system.
- On the models with the 1GR-FE engine, once the system is set to a desired vehicle speed, the throttle valve position is adjusted automatically to maintain the vehicle speed without depressing the accelerator pedal. This system effects control through the ETCS-i (Electronic Throttle Control System-intelligent).
- The cruise control ECU is integrated in the ECM.
