■ RUST-RESISTANT BODY

1. General

Rust-resistant performance is ensured by the use of anti-corrosion sheet steels, as well as by an anti-corrosion treatment, which includes the application of anti-rust wax, sealer and anti-chipping paint to corrosion-prone parts such as the engine hood, doors, and hinges.

2. Anti-corrosion Sheet Steel

Anti-corrosion sheet steel is used as the following illustration.

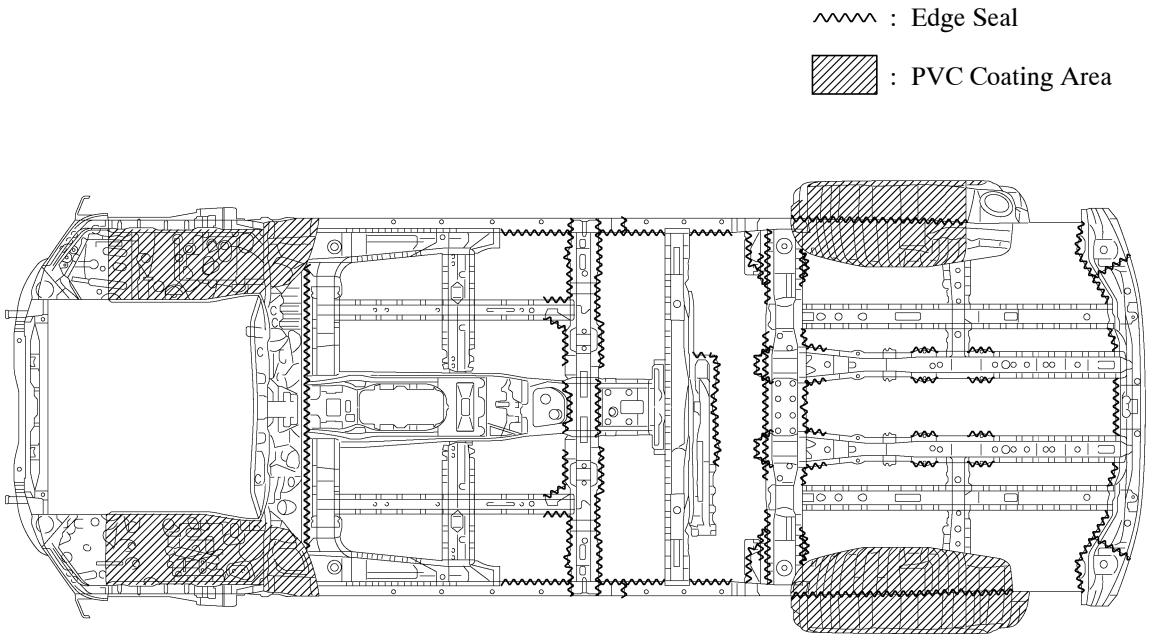

280BO07

3. Wax and Sealer

Wax and sealer are applied to the hemmed portions of the engine hood, door panels, fuel lid, door hinge and back door hinge to improve rust-resistant performance.

4. Under Coat

PVC (Polyvinyl Chloride) coating is applied to the wheel housings, and other parts that are located where, they are susceptible to stone chipping damage, improving the rust-resistant of these areas.

5. Anti-Chipping Application

On the models for South Africa, PVC coating is applied to the rocker panel area to enhance anti-chipping performance and ensure rust resistance.
