INTERIOR

Instrument Panel

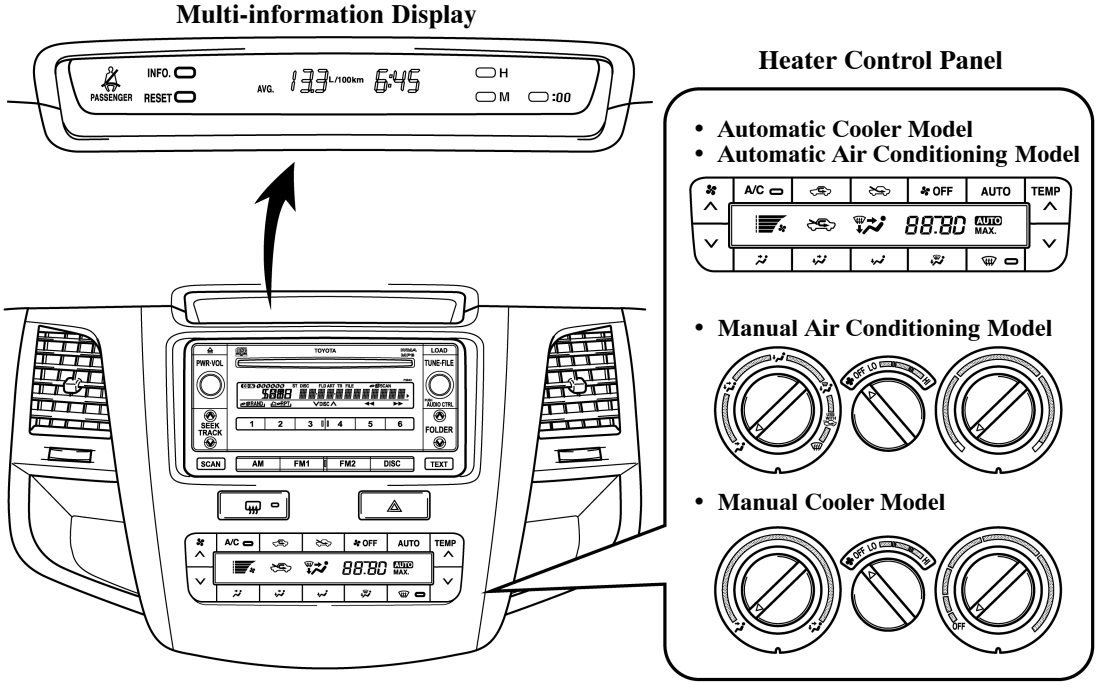

- With a high quality feeling and long-lasting design as the main theme, we have produced a design with solid quality combined with a spacious interior space and functionality.
- The layout of the combination meter, register, heater control panel and switches has been designed in pursuit of operability and ready visibility.

Center Cluster

- A center cluster design that integrates a multi-information display, an audio head unit, and a heater control panel is used. For details of provision, see Equipment List starting on page MO-23.
- 3 types of heater control panels have been made available, depending on the type of air conditioning system.
