EQUIPMENT

TOYOTA Parking Assist-sensor System

- The TOYOTA parking assist-sensor system, which assists the driver in maneuvering the vehicle in small spaces, is provided. For details of provision, see Equipment List starting on page MO-23.
- When the vehicle is reversing, this system informs the driver that the vehicle is approaching an obstacle by changing the sounding intervals of the buzzer.
- This system uses two ultrasonic sensors that are mounted on the rear bumper to detect that the vehicle is approaching an obstacle and inform the driver by way of a buzzer.
